Basic SEO

Common Keywords

A list of keywords that appear frequently in the text of your content.

Here are the most common keywords we found on the page:

read gurugram plot gurgaon road main meter plots size sale

SEO Description

SEO analysis of your page's meta-description.

No meta description was found on this page.

Write a meta-description for your page. Use your target keyword(s) (in a natural way) and write with human readers in mind. Summarize the content - describe the topics your article discusses.

The description should stimulate reader interest and get them to click on the article. Think of it as a mini-advert for your content.

H1 Heading

SEO Analysis of the H1 Tags on your page.

One H1 tag was found on the page.

Arora Realtech

H2 Headings

SEO analysis of the H2 headings on your page.

One or more H2 tags were found on the page.

Image ALT Attributes

SEO analysis of the "alt" attribute for image tags.

- ✓ All images on the page have alt attributes.

Keywords in Title & Description

SEO analysis of the HTML page's Title and meta description content.

- ✗ No page description found on the page.

You need to use titles and descriptions that are attractive to users and contain your keywords. Use the keywords naturally - keyword stuffing is usually detected and will result in a lower ranking. What's more, it's pretty off-putting for potential readers, who are more likely to click on an appealing link.

Links Ratio

SEO analysis of the ratio of internal links to external links.

- ✓ The page has a correct number of internal and external links.

internal: 30

external: 4

SEO Title

SEO analysis of the HTML title of the page.

- ✓ The page title has 20 characters, which is good.

Arora Realtech | com

Create a responsive site

Our analysis of the use of CSS media queries in your content.

- ✓ The CSS code contains **media queries**.

Media query found in

http://www.arorarealtech.com/sites/default/files/css/css_0AMXxn0v8omYfcwNsXpAiP2g7KrF0rQFsaStx1p76dw.css

Homepage Is Reachable

Tests if your homepage is reachable by making an HTTP request.

- ✓ Homepage is reachable

Advanced SEO

Search Preview

! Here is how the site may appear in search results:

Arora Realtech | com

<https://www.arorarealtech.com/node/9>

Canonical Tag

Does the content have a "canonical" URL?

✓ The page is using the canonical link tag.

<https://www.arorarealtech.com/node/9>

Noindex Meta

Does the content contain a noindex robots meta tag?

✓ The page does not contain any **index** meta tag or header.

Mobile Search Preview

! Here is how the site may appear in search results on a mobile device:

Arora Realtech | com

<https://www.arorarealtech.com/node/9>

Mobile Snapshot

A snapshot of how your content appears on a mobile device.

WWW Canonicalization

Does the site appear on more than one URL?

✗ The www and non-www versions of the URL are not redirected to the same site.

Decide whether you want your site's URLs to include a "www", or if you prefer a plain domain name. There are [marketing pros and cons](#) for each choice, but neither one is better or worse for SEO purposes - as long as you're consistent.

You should use HTTP redirections (301 permanent redirects) to pass PageRank from the "wrong" URLs to the standard (canonical) ones. That way, your content will still benefit from backlinks if someone makes a mistake and uses the wrong URL.

OpenGraph Meta

Does your site use OpenGraph meta tags?

✗ Some Opengraph meta tags are missing.

Insert a customized OpenGraph meta tag for each important page on your site. The standard is very well documented - you can learn more from Facebook's developer pages.

The Rank Math WordPress plugin provides a simple but powerful interface to craft your OpenGraph data. You get immediate feedback with an interactive preview, and you don't have to mess around with raw HTML markup.

Schema Meta Data

Does the content include relevant Schema.org metadata?

✖ No Schema.org data found on the page.

The Rank Math WordPress plugin makes it extremely easy to add highly relevant Schema.org markup to your site. It has a simple graphical interface, so you don't have to get your hands dirty with complex HTML markup.

Sitemaps

Does the site use an XML sitemap?

✖ No sitemaps found.

If you don't have an XML sitemap, the best option is to install a plugin that creates sitemaps for you. That way you'll know the sitemap will always be up-to-date. Plugins can also automatically ping the search engines when the XML file is updated.

The Rank Math WordPress plugin gives you complete control over your site's XML sitemaps. You can control the settings for each page as you write or edit it, and Rank Math will ping Google as soon as you submit your edits.

This results in fast crawls and indexing.

Robots.txt

Does your site have a valid robots.txt file

✔ The site has a robots.txt file which includes one or more **Disallow:** directives. Make sure that you only block parts you don't want to be indexed. Try our [free robots.txt editor tool](#) to easily test and validate your robots.txt file.

Keep your content fresh

Checks for recent content updates using available signals (XML sitemap, og:updated_time, or Last-Modified header).

✔ The content is fresh. Last updated on 2026-02-19 (0 days ago) via Last-Modified header (XML Sitemap and og:updated_time not found).

Broken Links

Detects broken or dead links (404/500 errors) in the website that may harm SEO and user trust.

✖ The page has broken link(s).

Regularly scan the site for broken links. Fix them by updating to a valid URL, removing the link, or setting up proper 301 redirects. Using a CMS plugin or automated crawler can help monitor and resolve these issues proactively.

If links are protected by bot mitigation (e.g., CAPTCHA or rate-limiting), consider whitelisting known bots or adjusting protection settings to allow valid crawlers.

Performance

Page Size

An analysis of the size of your HTML file.

- ✓ The size of the HTML document is 5 Kb, under the average HTML size of 33 Kb.

Response Time

How fast does your server respond to requests?

- ✓ The response time is under 0.8 seconds which is great.

Image Headers Expire

Do your images use "expires" headers?

- ✓ No local images found on the page

Minify CSS

Are your CSS files properly minified?

- ✗ Some CSS files don't seem to be minified.

`http://www.arorarealtech.com/sites/default/files/css/css_OAMXxn0v8omYfcwNsXpAiP2g7KrF0rQFsaStx1p76dw.css`

`http://www.arorarealtech.com/sites/default/files/css/css__g400XMJaL8010at3jgU6A3IyCUpQnSK5vcWVSdc0kk.css`

CSS can add a lot of load-time to your website. Thankfully, there is an easy solution to minify CSS using WP Rocket. [Read more](#)

Page Objects

Analysis of the embedded objects in the pages.

- ✓ The page makes 27 requests.

`total: 27`

`images: 17`

`javascript: 7`

`stylesheets: 3`

Minify Javascript

Does the site use minified JavaScript?

- ✗ Some Javascript files don't seem to be minified.

`https://www.google-analytics.com/analytics.js`

`http://www.arorarealtech.com/sites/default/files/js/js_k2_ObLEYDCyhhVJbmaqVIGUBFjJ8fyF-N4e_RWA5M4Y.js`

JavaScript files appear in many places, including frameworks (like Bootstrap), themes and templates, and third-party plugins.

So you should track down where the culprit (un-minified) JavaScript files come from. For instance, if the un-minified JavaScript lives inside a third party plugin, you can minify it. But when you update the plugin to a new version, the JavaScript files will need to be compressed again.

There are server-side tools (including WordPress plugins) to automatically minify JavaScript files.

Mobile Speed

How fast does your website respond to mobile users?

✖ Test execution failed.

Optimize your images for mobile devices by serving them in modern formats (like WebP) and using responsive image sizes.

Use lazy loading for images and iframes to prevent offscreen content from slowing down initial load time.

Minify CSS and JavaScript files, and defer non-critical JavaScript to reduce rendering delays.

Enable browser caching and consider using a content delivery network (CDN) to serve assets quickly across different geolocations.

Audit your site using tools like [GTmetrix](#) to uncover and address mobile-specific performance issues.

Consider implementing Accelerated Mobile Pages (AMP) if appropriate for your use case.

Security

Theme Visibility

Theme Visibility

! The theme is not publicly visible, so it is not easily identifiable.

Visible Plugins

Visible Plugins

✓ Hurray! None of the plugins are publicly visible.

Directory Listing

Does your web server list the contents of the directories?

✓ Directory Listing seems to be disabled on the server.

Secure Connection

Is your content served over a secure connection?

✓ The site is using a secure transfer protocol (https).
