Basic SEO

Common Keywords

A list of keywords that appear frequently in the text of your content.

Here are the most common keywords we found on the page:

properties property luxury clients gurgaon home search dubai estate expert

SEO Description

SEO analysis of your page's meta-description.

The meta description is 135 characters long, which is good. Search My Property. Explore the ideal property that fits your lifestyle and budget with your trusted real estate consultant in gurgaon

H1 Heading

SEO Analysis of the H1 Tags on your page.

Too many H1 tags found on the page (4). For the best SEO results there should be exactly one H1 tag on each page.

YOUR TRUSTED REAL ESTATE CONSULTANT IN GURGAON

Ultra Luxury

Luxury

Premium

WordPress sites usually insert the page or post title as an H1 tag (although custom themes can change this behavior).

Ensure your most important keywords appear in the H1 tag - don't force it, use them in a natural way that makes sense to human readers.

Because your headline plays a large role in reader engagement, it's worth spending extra time perfecting it. Many top copywriters spend hours getting their headlines just right - sometimes they spend longer on the headline than the rest of the article!

A good headline stimulates reader interest and offers a compelling reason to read your content. It promises a believable benefit.

You should write as if your readers are selfish people with short attention spans (because that describes a large percentage of the world's population). Readers visit websites for selfish reasons - they're not there to make ****you**** happy.'

H2 Headings

SEO analysis of the H2 headings on your page.

- ✓ One or more H2 tags were found on the page.

SEARCH MY PROPERTY

TOP BUILDERS

Image ALT Attributes

SEO analysis of the "alt" attribute for image tags.

- ✗ Some images on the page have no alt attribute. (17)

```

+7 More...

```

Check your images for missing alt tags, and add useful descriptions to each image. Add your keywords or synonyms - but do it in a natural way.

Keywords in Title & Description

SEO analysis of the HTML page's Title and meta description content.

- ✓ One or more common keywords were found in the title and description of the page.

title: property, search, estate

description: property, gurgaon, search, estate

Links Ratio

SEO analysis of the ratio of internal links to external links.

There are one or more issues with the number of links on this page:
Too few internal links (8).

internal: 8

external: 7

Add links to external resources that are useful for your readers. Make sure you link to high-quality sites - Google penalizes pages that link to "spammy" sites (ones that break the Google webmaster guidelines).

Ideally, the links should be highly relevant to the subject you're writing about. It's impossible to cover every aspect of a subject on a single page, but your readers may be fascinated by some detail you barely touch on. If you link to a resource where they can learn more, they'll be grateful. What's more, you'll be rewarded with higher rankings!

SEO Title

SEO analysis of the HTML title of the page.

- ✓ The page title has 54 characters, which is good.

Search My Property: Real Estate Consultant In Gurugram

Create a responsive site

Our analysis of the use of CSS media queries in your content.

- ✓ The CSS code contains **media queries**.
-

Homepage Is Reachable

Tests if your homepage is reachable by making an HTTP request.

- ✓ Homepage is reachable

Advanced SEO

Search Preview

- ! Here is how the site may appear in search results:

Search My Property: Real Estate Consultant In Gurugram

<https://www.searchmyproperty.com>

Search My Property. Explore the ideal property that fits your lifestyle and budget with your trusted real estate consultant in gurgaon

Canonical Tag

Does the content have a "canonical" URL?

- ✓ The page is using the canonical link tag.

<https://www.searchmyproperty.com>

Noindex Meta

Does the content contain a noindex robots meta tag?

- ✓ The page does not contain any **index** meta tag or header.
-

Mobile Search Preview

Here is how the site may appear in search results on a mobile device:

Search My Property: Real Estate Consultant In Gurugram

<https://www.searchmyproperty.com>

Search My Property. Explore the ideal property that fits your lifestyle and budget with your trusted real estate consultant in gurgaon

Mobile Snapshot

A snapshot of how your content appears on a mobile device.

WWW Canonicalization

Does the site appear on more than one URL?

- ✓ Both www and non-www versions of the URL are redirected to the same site.

OpenGraph Meta

Does your site use OpenGraph meta tags?

- ✓ Opengraph meta tags have been found.

Schema Meta Data

Does the content include relevant Schema.org metadata?

- ✓ Schema.org data has been found on the page.
-

Sitemaps

Does the site use an XML sitemap?

- ✓ The site has one or more sitemaps.
-

Robots.txt

Does your site have a valid robots.txt file

- ✓ The site has a robots.txt file which includes one or more **Disallow:** directives. Make sure that you only block parts you don't want to be indexed. Try our [free robots.txt editor tool](#) to easily test and validate your robots.txt file.
-

Keep your content fresh

Checks for recent content updates using available signals (XML sitemap, og:updated_time, or Last-Modified header).

- ✓ The content is fresh. Last updated on 2026-02-16 (3 days ago) via XML Sitemap.
-

Broken Links

Detects broken or dead links (404/500 errors) in the website that may harm SEO and user trust.

- ✗ The page has broken link(s).

Regularly scan the site for broken links. Fix them by updating to a valid URL, removing the link, or setting up proper 301 redirects. Using a CMS plugin or automated crawler can help monitor and resolve these issues proactively.

If links are protected by bot mitigation (e.g., CAPTCHA or rate-limiting), consider whitelisting known bots or adjusting protection settings to allow valid crawlers.

Performance

Page Size

An analysis of the size of your HTML file.

- ✗ The size of the HTML document is 189 Kb, over the average of 33 Kb and our recommendation of 50 Kb.

First, remove any unnecessary tags from your markup. This includes developer comments, which are invisible to your users - search engines ignore the text in comments, too.

Sometimes inline CSS is a culprit. A little inline CSS can help your page render faster. Too much will bloat the HTML file and **increase the page loading time**.

You can reduce CSS repetition with HTML class and ID attributes. Often the same rules will be repeated across many page elements, embedded in each tag's "style" attribute. You can extract them into a single "style" tag and use classes and ID's to target each element.

Removing white space can have an **impact on your HTML page's size**. White space characters like carriage returns and tabs are ignored by the browser, but they make the markup easier for developers to read. So you should always **strip them from your templates or themes** before you use them in a production environment.

Response Time

How fast does your server respond to requests?

- ✗ The response time of the page is 2.39 seconds. It is recommended to keep it equal to or below 0.8 seconds.

The simplest and fastest fix is to use a caching plugin, like [WP Rocket](#). Caching plugins keep a cached version of each page on your site. Instead of building the page from scratch, the server will send the cached copy.

You can get an even greater speed-up with a content delivery network service. These services host a cache of your content on multiple servers spread out across the globe. A user's request is handled by the edge server that's closest to their physical location, so the content arrives very fast indeed.

Image Headers Expire

Do your images use "expires" headers?

- ✓ No local images found on the page

Minify CSS

Are your CSS files properly minified?

- ✓ All CSS files appear to be minified.

Page Objects

Analysis of the embedded objects in the pages.

! The page makes 57 requests. A large number of requests can result in slow page loading.

```
total: 57
images: 33
javascript: 24
stylesheets: 0
```

Try to replace embedded objects with HTML5 alternatives.

Minify Javascript

Does the site use minified JavaScript?

✓ All Javascript files appear to be minified.

Mobile Speed

How fast does your website respond to mobile users?

✗ The page performance is poor; critical issue(s) found in key metrics.

Optimize your images for mobile devices by serving them in modern formats (like WebP) and using responsive image sizes.

Use lazy loading for images and iframes to prevent offscreen content from slowing down initial load time.

Minify CSS and JavaScript files, and defer non-critical JavaScript to reduce rendering delays.

Enable browser caching and consider using a content delivery network (CDN) to serve assets quickly across different geolocations.

Audit your site using tools like [GTmetrix](#) to uncover and address mobile-specific performance issues.

Consider implementing Accelerated Mobile Pages (AMP) if appropriate for your use case.

Security

Theme Visibility

Theme Visibility

! The theme is not publicly visible, so it is not easily identifiable.

Visible Plugins

Visible Plugins

- ✓ Hurray! None of the plugins are publicly visible.
-

Directory Listing

Does your web server list the contents of the directories?

- ✓ Directory Listing seems to be disabled on the server.
-

Secure Connection

Is your content served over a secure connection?

- ✓ The site is using a secure transfer protocol (https).
