Overview

This section summarizes your site's overall SEO performance, providing insights from on-page, technical, off-page, site speed, and social signals, and highlights both strengths and priority issues to address.

On-Page SEO	75%
Technical SEO	60%
Off-Page SEO	75%
Social Media	100%

Issues and Recommendations

This section identifies your site’s most critical SEO issues and delivers clear recommendations to resolve them and strengthen search performance.

Type	Element	Priority	Problem and Recommendation
Page Speed	DOM Size		Unable to retrieve DOM Size metric. The page may be inaccessible or the API is unavailable.
Page Speed	Interaction to Next Paint (INP)		Clicks and taps on the page feel noticeably delayed and sluggish. Defer non-critical JavaScript,

move work off the main thread, and reduce third-party script impact to improve the user experience.

Page Speed	Mobile Friendliness		Your page is not mobile friendly. Mobile users may struggle with tiny text, missing responsive layouts, or hard-to-tap buttons. Implement a responsive viewport, increase font sizes, and enlarge/space tap targets.
Off-Page SEO	Nofollow vs Dofollow		Your backlink profile contains too many dofollow links. Google may consider this a paid or manipulative pattern. Audit your link-building tactics and diversify sources.
Technical SEO	Structured Data		Your page includes structured data, but it contains critical errors. Fix the invalid or incomplete markup so search engines can read it and display rich-result features.
Technical SEO	Canonical		There are critical issues with your canonical tag that may result in search engines indexing incorrect or duplicate pages. Ensure your page includes a single canonical tag that points to a live URL to avoid confusion.
On-Page SEO	Meta Description		Your meta description is too long (154 characters). Consider shortening it to 100-130 characters.
On-Page SEO	Title		Your title is too long (72 characters). Consider shortening it to 50-60 characters.
Technical SEO	Hreflang		No hreflang tags found. If your site has language- or region-specific versions, add hreflang tags to help search engines show the right version of the page.
Page Speed	Overall Performance		Your page performs reasonably well but doesn't fully meet Google's targets. Compress large

images, remove unused CSS/JavaScript, and enable caching to improve performance.

Technical SEO

This section presents the results of the technical SEO audit, covering elements like crawlability, indexation, security, and structured data, along with recommendations to resolve any issues.

Element	Priority	Problem and Recommendation
Favicon	✓	Your favicon is valid and accessible. /assets/img/favicon/favicon-9...
Noindex	✓	Your page is properly configured for search engine indexing.
Sitemap	✓	Your website contains a valid XML sitemap. https://www.elanlimited.com/si...

Hreflang		No hreflang tags found. If your site has language - or region - specific versions, add hreflang tags to help search engines show the right version of the page.
Language		Your website language is properly declared. en
Canonical		There are critical issues with your canonical tag that may result in search engines indexing incorrect or duplicate pages. Ensure your page includes a single canonical tag that points to a live URL to avoid confusion.
Robots.txt		Your robots.txt file is properly configured and accessible. https://www.elanlimited.com/r...
Structured Data		Your page includes structured data, but it contains critical errors. Fix the invalid or incomplete markup so search engines can read it and display rich - result features. BreadcrumbList LocalBusiness Organization

Page Speed & Core Web Vitals

This section shows your page load time, Core Web Vitals, and other speed signals that affect search results and user experience. You get a clear assessment, note any issues, and learn the exact steps to make your pages faster and strengthen overall SEO impact.

All recommendations follow Google's performance guidelines.

Element	Priority	Problem and Recommendation
Performance Score		Your page performs reasonably well but doesn't fully meet Google's targets. Compress large images, remove unused CSS/JavaScript, and enable caching to improve performance. Performance Score: 77/100
Mobile Friendliness		Your page is not mobile friendly. Mobile users may struggle with tiny text, missing responsive layouts, or

hard-to-tap buttons. Implement a responsive viewport, increase font sizes, and enlarge/space tap targets.

Mobile Friendliness score: 1/3

Largest Contentful Paint (LCP)		Users may feel the main image or content of the page loads slowly. Optimize images and preload critical assets to speed things up. LCP: 2.7s
Interaction to Next Paint (INP)		Clicks and taps on the page feel noticeably delayed and sluggish. Defer non-critical JavaScript, move work off the main thread, and reduce third-party script impact to improve the user experience. INP: 2.674s
Cumulative Layout Shift (CLS)		Page elements are visually stable while loading, so elements don't jump around upon page load. CLS: 0.0
Time to First Byte (TTFB)		The server responds quickly, so users start receiving data almost instantly. TBT: 0.009s
First Contentful Paint (FCP)		The first text or image on the page appears almost instantly, giving users feedback that the page is loading. FCP: 0.7s
Speed Index		Visual content appears very quickly and users see your page almost instantly. Speed Index: 2.9s
Total Blocking Time (TBT)		Scripts rarely block the main thread, so interactions feel smooth and responsive. TBT: 0.1s
DOM Size		Unable to retrieve DOM Size metric. The page may be inaccessible or the API is unavailable.

What Is Semrush's SEO Checker?

Semrush's SEO Checker is a free SEO audit tool that scans your website and finds critical SEO issues that could limit your search performance. The SEO Checker returns an overall SEO score, a prioritized to-do list, and a detailed report that shows both the elements that passed inspection and those that need attention.

The SEO Checker analyzes meta tags, headings, keywords, backlinks, page speed, mobile friendliness, Core Web Vitals, social signals, and more.

Use the insights to implement high-impact fixes first and track quick wins.

For a deeper, site-wide view, upgrade to Semrush's Site Audit tool. Site Audit crawls your entire site, checks for hundreds of technical and on-page issues, tracks progress over time, and lets you schedule automatic audits.

The SEO Checker provides a quick snapshot of your SEO health, while Site Audit provides a full roadmap for long-term SEO success.

Issues and Recommendations

This section identifies your site's most critical SEO issues and delivers clear recommendations to resolve them and strengthen search performance.

Type	Element	Priority	Problem and Recommendation
On-Page SEO	Title		Your title is too long (75 characters). Consider shortening it to 50-60 characters.
On-Page SEO	Meta Description		Your meta description is missing! Add a compelling description of the page to attract more clicks. Aim for 100-130 characters.
Technical SEO	Noindex		Your page contains a noindex directive, which means search engines like Google can't show it in search results. Remove the noindex tag if you want this page to appear in search results.
Technical SEO	Canonical		There are critical issues with your canonical tag that may see search engines index incorrect or duplicate pages. Ensure your page includes a single canonical tag that points to a live URL to avoid confusion.
Performance	Mobile Friendliness		Your page is not as mobile friendly as it should be. Improve mobile usability by adding a responsive viewport tag and enlarging text and small tap targets.
Off-Page SEO	Authority Score		Your Authority Score is slightly lower than your competitors'. Build more high-quality backlinks and brand mentions to close the gap.
Off-Page SEO	Backlinks		Your website has slightly fewer backlinks than the competitor average. Focus on building more high-quality backlinks to close the gap.
Social Media	YouTube		No link to a YouTube channel was found. Add a working YouTube link to showcase your video content and boost visitor engagement.

Why Check Your Website's SEO?

You should check your website's SEO to understand how well it's positioned to perform in Google search, identify issues that may be holding it back, and learn exactly how to fix them to improve your rankings and drive more traffic.

An SEO audit reveals hidden problems like missing titles, slow pages, and indexing issues. Fixing these problems helps Google find your pages and keeps visitors engaged.

Regular audits also confirm what you're doing right. Strong scores for speed, on-page SEO, off-page SEO, mobile friendliness, and social visibility mean your strategy is working.

If you're new to SEO, use the report as a learning tool. Start by fixing high-priority technical errors. Then optimize your page titles, descriptions, and headings. Finally, follow step-by-step recommendations to improve speed and mobile scores.

Repeating this process regularly helps you measure progress, refine your SEO strategy, and attract more qualified traffic. Upgrading to Semrush's Site Audit tool allows you to schedule regular, automated audits and stay apprised of your SEO health.

What Does Our SEO Checker Analyze?

Our free SEO Checker analyzes on-page, off-page, technical, and performance factors to give you a complete view of your site's SEO health.

- **On-page SEO:** We check SEO titles, meta descriptions, headings, keywords, and content to confirm each page is optimized according to best practices.
- **Off-page signals:** We review backlinks, referring domains, and authority scores to assess your site's authority and trust in the eyes of search engines.
- **Technical health:** We test crawlability, indexability, status codes, robots directives, sitemap coverage, canonical tags, and structured data so nothing blocks search engines from finding and reading your content.
- **Site performance:** We analyze page loading speed, mobile friendliness, and Core Web Vitals to ensure a fast, user-friendly experience.
- **Social media visibility:** We check to ensure you're leveraging social media to reach your target audience and build brand awareness and authority.

After the scan, you'll receive an overall SEO score as well as a list of recommendations. Each item includes clear instructions on what to fix and how to fix it, so you can improve rankings with confidence.

Are Unknown SEO Issues Holding You Back?

How to Use Your Site Audit Report

Here are a few ways to use Semrush's free SEO audit report:

Fix critical errors

Resolve crawl blocks, indexing problems, and other high-priority issues so search engines can find, crawl, and index every page.

Boost site speed and performance

Follow the report's page-speed tips, such as compressing images, streamlining code, and enabling caching to improve load times and user experience.

Optimize meta tags and on-page elements

Update titles, meta descriptions, headings, and alt text to align with best practices and improve click-through rates.

Identify keyword and content opportunities

Use the keyword ranking reports to create fresh pages or expand thin content that can capture additional traffic.

Strengthen off-page SEO

Review backlink insights, remove harmful links, and target high-value sites for outreach to build authority.

Validate your SEO efforts

High scores and very few issues confirm that you current optimization efforts are working, giving you confidence to stay the course.

Grow your SEO knowledge

Use analyzed elements and identified issues as a learning roadmap. Research these topics and implement best practices to deepen your expertise.

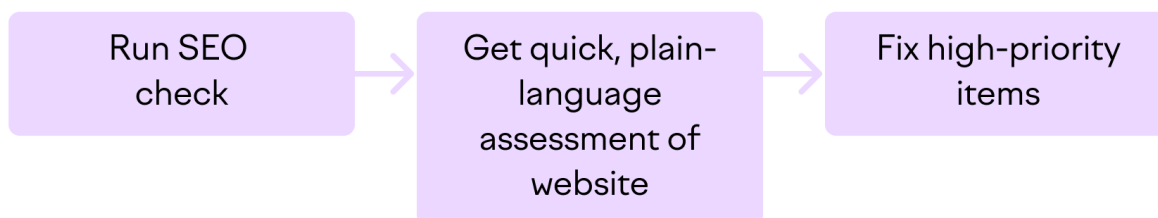

Track progress over time

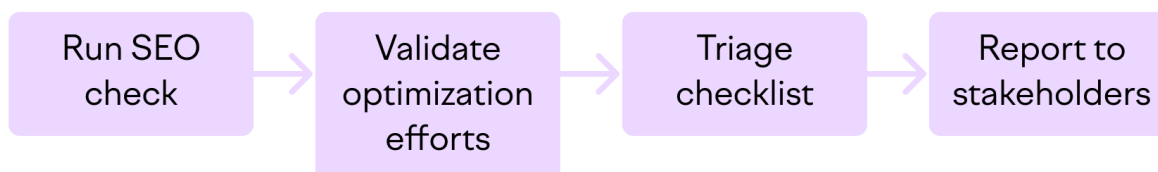

Re-run the SEO audit after each round of fixes to see your SEO score climb and to keep your site optimized for success.

Beginners and Small Business Owners

Intermediate SEOs and Marketers

Who Will Benefit Most from the Website SEO Checker?

The following groups will benefit most from using Semrush's SEO checker:

- **Beginners and Small Business Owners:** Get a quick, plain-language assessment of your website. The free SEO report highlights issues, explains why they're important, and provides recommendations for how to fix them. No advanced SEO knowledge is required.
- **Intermediate SEOs and Marketers:** Validate existing optimization efforts and uncover overlooked gaps. The SEO audit report offers a comprehensive, prioritized checklist, letting you optimize your SEO efforts to improve your strategy and demonstrate results to stakeholders.

Losing Traffic to Competitors and Don't Know Why?

Check your website's SEO for on-page and technical issues that may be holding you back. Register for a free account to get full access to our SEO audit tools.

Check Your Site's SEO

What Issues Will Our Website Audit Check For?

Our free SEO audit will identify issues with the following:

Meta tags and snippets

Missing and poorly written titles and descriptions confuse search engines and lower click-through rates. We flag tags that are too short, too long, or blocked from indexing.

Content depth and keyword usage

Thin pages and copied text struggle to rank. The audit highlights low-word-count pages so you can expand or consolidate.

Heading and page structure

Out-of-order H1-H3 tags, unoptimized heading structures, and complex URLs make crawling harder. We point out heading gaps, URL issues, and canonical problems.

Technical setup

Slow server response, mixed HTTPS, and oversized HTML files hurt visibility. The report lists status-code errors and other

server issues that need a fix.

Page speed and Core Web Vitals

Large images, render-blocking scripts, and heavy resources slow your site. We surface the performance issues optimize for faster load times and better user experience.

Mobile usability

Text too small, tap targets too close, or content wider than the screen push visitors away. The audit highlights mobile issues so you can meet Google's mobile-friendly standards.

Indexing and crawl access

Robots.txt blocks, noindex tags, and orphan pages stop search engines from seeing your content. We list every barrier so you can remove it.

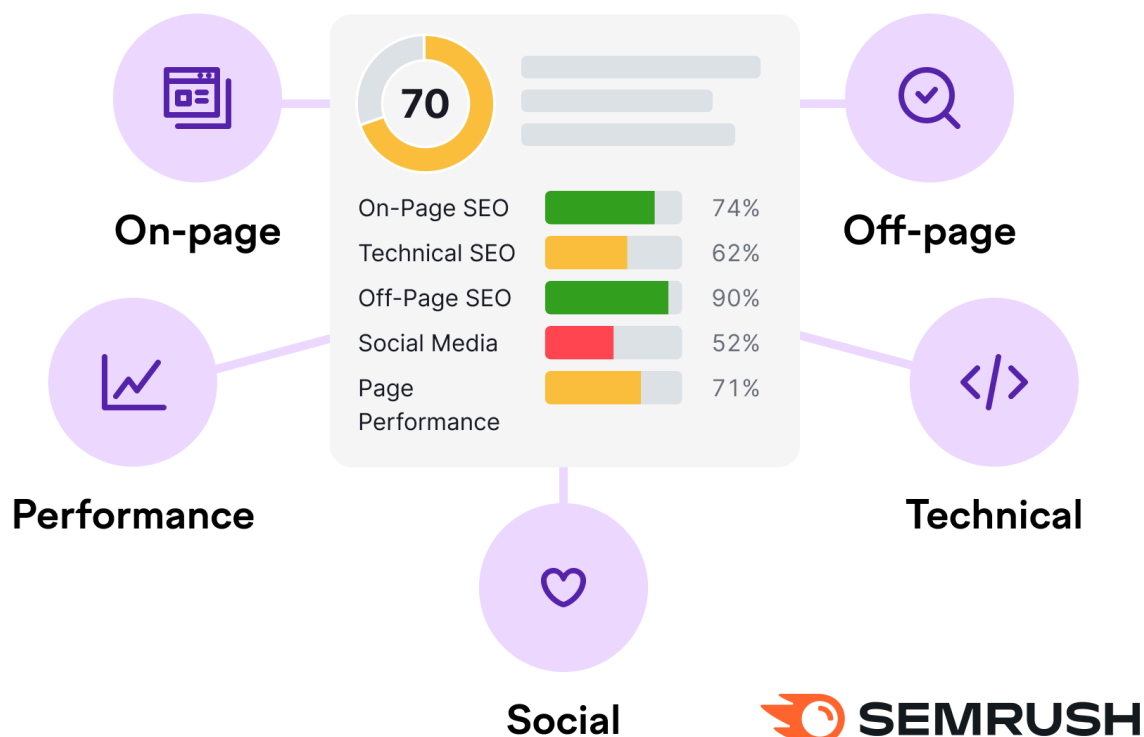

Backlink and trust signals

A weak or spam-heavy link profile drags down authority. The audit shows backlink gaps, nofollow distribution issues, and social share visibility so you can strengthen off-page SEO.

Fast, Comprehensive SEO Audit

Why Should You Use Semrush's SEO Checker?

You should use Semrush's SEO checker tool because it provides a fast, comprehensive report of your site English th.

The audit reviews on-page, off-page, technical, social, and page performance factors in one scan and provides actionable recommendations for how to fix any issues identified in the report.

Our website analysis tools use Semrush's extensive keyword and backlink databases for precise insights and explain every issue in plain language so both beginners and pros can act with confidence.

Run up to three checks a day for free, or upgrade to Semrush's Site Audit to access deeper scans, more SEO checks, and even more critical insights.
